

Table 1. Scenario for case «Vacancy searching»

Actors	Users, system
Purpose	View needed vacancy
Preconditions	User in case “Vacancies list”
Successful scenario: User sees vacancies list. If list is not empty, user can sort by available criteria and filter it. Also user can choose vacancy from the list and view it. Successful view is when user click on chosen vacancy and see new page with info about it.	
Result	Needed vacancy was found and seen by user

Table 2. Scenario for case «Filter adding»

Actors	Users, system
Purpose	Apply filter for vacancy list
Preconditions	User in case “Filter criteria”
Successful scenario: User sees available filter criteria: location, schedule, salary and specialization. User can choose criteria from list of variants or input it by him/herself. Input criteria must pass validation. In case of not passing validation alert message with hint will be shown, user could try again. After successful criteria input user should apply chosen filter to vacancies list.	
Result	Filter applied to the vacancies list
